LANGUAGES

Russian	★★★★★	Native	
English	★★★★★	TOEIC (2017) TOEFL (2020)	970/990 111/120
Korean	★★★★☆	TOPIK II (Test of Proficiency in Korean, 2020)	Level 6
German	★★☆☆☆	NA	
Kyrgyz	★★☆☆☆	NA	

SELF INTRODUCTION

My first full-time job in Korea was at the company dealing with software distribution and consulting. As a manager whose direct responsibility was communication with overseas partners engaged in IT, I had to learn more about current IT related trends and to acquire basic understanding of how software programs actually operate. As a result, my interest in software development had grown, at the same time marketing and sales position did not bring me as much joy or sense of fulfillment, so I decided to pursue a new career in programming.

Being a junior developer, I understand that there is still a lot to learn and to improve in my code. That is why I welcome any kind of criticism from fellow developers, juniors or seniors, as I think that each mistake or failure is a step towards success, and each contribution or opinion is equally important. Being part of a team means that every effort you invest into your work is aimed to benefit all, not myself alone. That being said, I am not afraid to admit that I don't know something and depending on the situation I would much rather ask for assistance if that would be better for our team's productivity. Lastly, I find the idea of lifelong learning very thrilling and programming as a job feels quite rewarding to me in a special way.

Hopefully, my diverse academic background will enable me to smoothly adjust to new environment and any type of work. I began my journey from backend and Java, but continued as a frontend developer working with javascript, so I believe there are no strict limitations to what we do in IT world. I am eager to explore new tools, frameworks or languages and open to all opportunities awaiting for me ahead. In conclusion, I sincerely wish to become a valuable asset to my future company, where everyone on the team can work and grow together.
